INTRODUCTION

During the Academic year 2022-2023 I am the B.Sc 1st year CBZ Botany student has made a field visit on July 16, 2023 around the campus of Anjuman Institute for the collection of Algae, Bryophyte, Pteridophyte, Gymnosperm and Angiosperm specimens which are prescribed in our (NEP) syllabus. It was a visit by a one student with our Ma'am. to the campus of Anjuman Institute to away from this natural.

The main aim of our field visit was to observe the habitat of Algae, Bryophyte, Pteridophyte and also to collect them.

I was made field visit on botany which enhanced growth of our knowledge and initiated the feeling of research in as our field visit become successfully mainly because of our ma'am. The specimens we have observed are collected and thus it is explained in this project.

MARCHANTIA

Classification:-

Division :- Bryophyta.

Order :- Marchantiales

Class :- Hepaticales.

Family :- Marchantiaceae.

Genus :- Marchantia.

- * Gametophytic plant body of Marchantia is prostrate and dorsoventrally differentiated.
- * The thallus is green or dark green in colour & dichotomously branched.
- * It has a wavy margin with a distinct midrib which extends upto apex.
- * The ventral surface on either side of midrib bears two or more rows of scales which protect the growing point.
- * The plant body detached to the substratum by means of smooth and tuberculate rhizoids.

CONCLUSION

The field is conducted by the Botany department to study the diversity of different Fungi. Lichens was successfully. And all of us have observed and practically studied all the specimen in this natural habit and habitat which are described earlier in the report.

We are all once again thankful to our Botany department for giving such opportunity to study the diversity of Botany.
Thank you All.
